What is Malware ?

Malware is a code that is used to perform malicious actions.

Types of Malwares

- ★ Virus
- ★ Worm
- ★ Trojan
- ★ Spyware
- ★ Ransomware
- ★ Adware
- ★ Rootkit

...

Types of Malwares

★ Virus

- ❏ Replicating ability.

- ❏ Delete
- ❏ Encrypt Files
- ❏ Modify Applications
- ❏ Disable functions

Types of Malwares

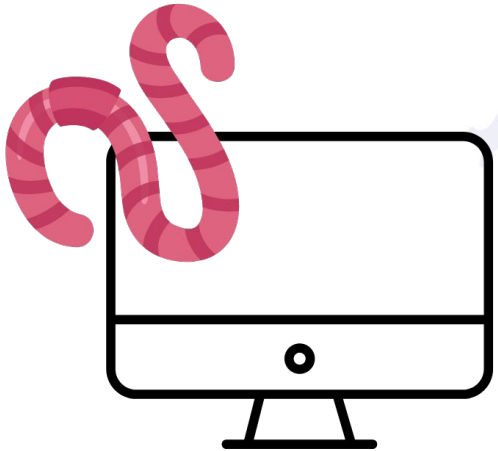
Key points:

- ★ Attached to files to corrupt them.
- ★ Multiply.
- ★ Requires an existing file to infect.
- ★ Needs a person to initiate itself that is, not self propagating

Types of Malwares

★ Worm

Self-replicate and propagate independently.
Stand-alone malicious programs.



- ❏ Enters via the network or downloaded file
- ❏ Multiply and spread

Types of Malwares

Key points:

- ★ Replicate themselves.
- ★ No need of activation.
- ★ Multiply and send it self without user intervention.
- ★ Fast propagation.

Types of Malwares

★ Trojan

Type of malicious code or software that looks legitimate but can take control of your computer.

Types of Malwares

Key points:

- ★ Pretends to be legitimate.
- ★ Deceive user and get into system.
- ★ Cannot replicate.

Types of Malwares

★ Spyware

Software that infiltrates your computing device, stealing your sensitive information.

- ❏ Bank account information.
- ❏ Steal your personal identity.

Types of Malwares

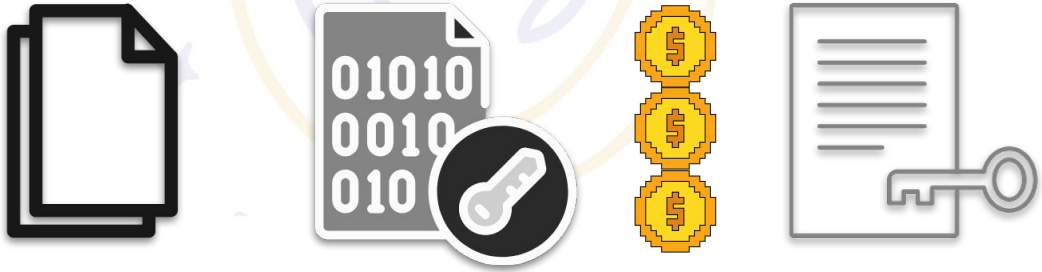
Key points:

- ★ Installed without the user’s knowledge.
- ★ Gathers information about the user.
- ★ Thus spys on the user and his activities.
- ★ Keylogging

Types of Malwares

★ Ransomware

A form of malware that encrypts victim's files and data.



Types of Malwares

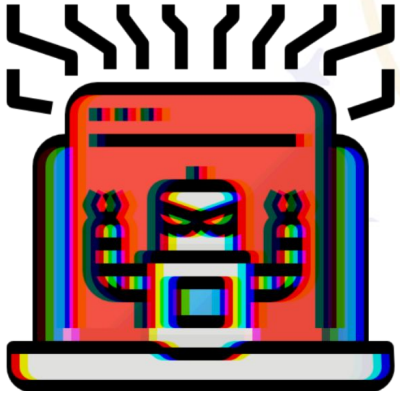
Key points:

★ Encrypts your files and in return demands for money for the decryption key.

Types of Malwares

★ Rootkit

Malicious software that allows an unauthorized user to have privileged access.



Types of Malwares

Key points:

- ★ Hide themselves within another application and uses operating system’s file to hide itself, such as registry key, running processes etc.
- ★ Hard to find and clean-out.

Check Examples

Samples

- WANNACRY
- ILOVEYOU
- STUXNET
- Cryptolocker
- Petya
- Zeus
- ...

Sample - 1

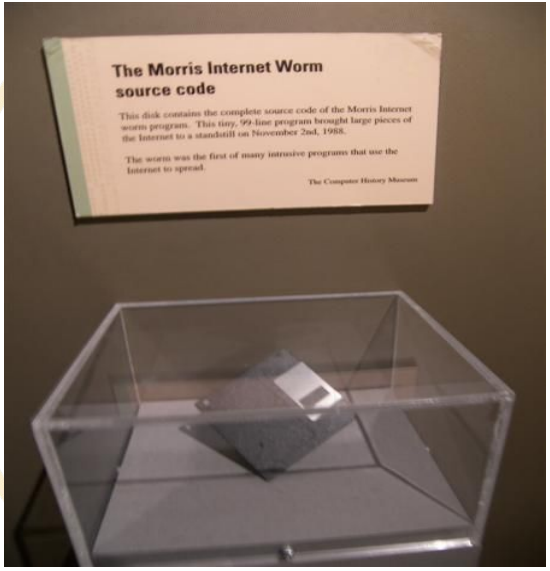
★ Morris worm

A form of malware that encrypts victim's files and data.

- ❏ November 1988
- ❏ How big the internet was?
- ❏ Worked well
  - ❏ Copying
  - ❏ Send signals
- ❏ First DDos attack

Sample - 1

★ Morris worm
“99 line program”



https://en.wikipedia.org/wiki/Morris_worm

Sample -II

★ ILOVEYOU

- ❑ WORM
- ❑ 2000
- ❑ 10 MILLION Windows PCs

Sample -III

★ Wannacry

- ❑ Ransomware
- ❑ May 2017
- ❑ 200,000 devices

Sample -IV

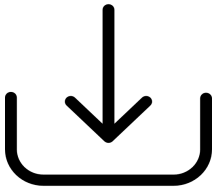
★ Zeus

- ❏ Trojan-horse
- ❏ July 2007
- ❏ By 2009, it compromised many accounts present on the companies:

https://en.wikipedia.org/wiki/Zeus_(malware)

Sample -IV

- Also came to be known as zbot.
- Creates a botnet.

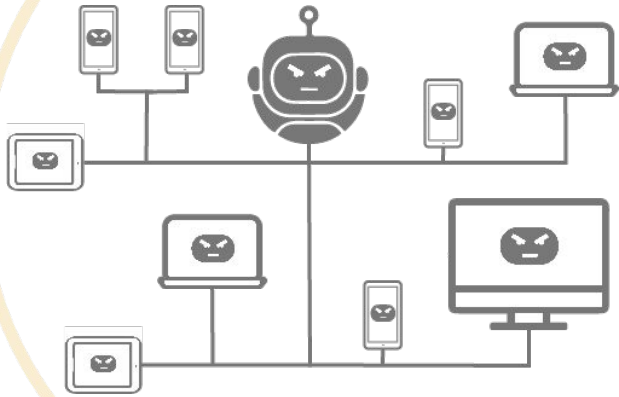


https://en.wikipedia.org/wiki/Zeus_(malware)

Types of Malwares

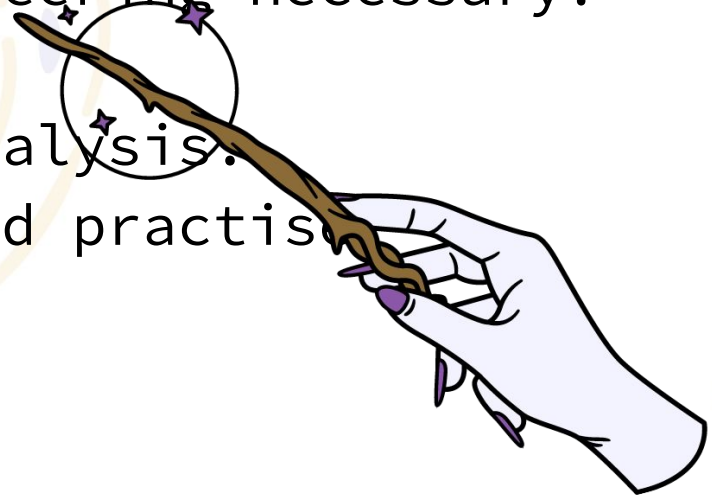
★ Botnet

Networks of computers infected by malware (such as viruses, keyloggers and other malicious software) and controlled remotely by attackers.



Contents

- ★ What is a Malware?
- ★ Why is reverse engineering necessary?
- ★ PE file structure.
- ★ Steps for Malware analysis.
- ★ Windows Reversing and practise.



Contents

- ★ What is a Malware?
- ★ Why is reverse engineering necessary?
  - Dealing with an uninvited guest on your system.
  - Prevention and cure for the infected systems.
- ★ PE file structure.
- ★ Steps for Malware analysis.
- ★ Windows Reversing and practise.

Scenario

Suppose that a system is infected with a malware...

- ❏ Collect the evidences:
  - ❏ File
  - ❏ Network traffic analysis.
  - ❏ Changes in the system.
  - ❏ ...

Why is reverse engineering necessary ?

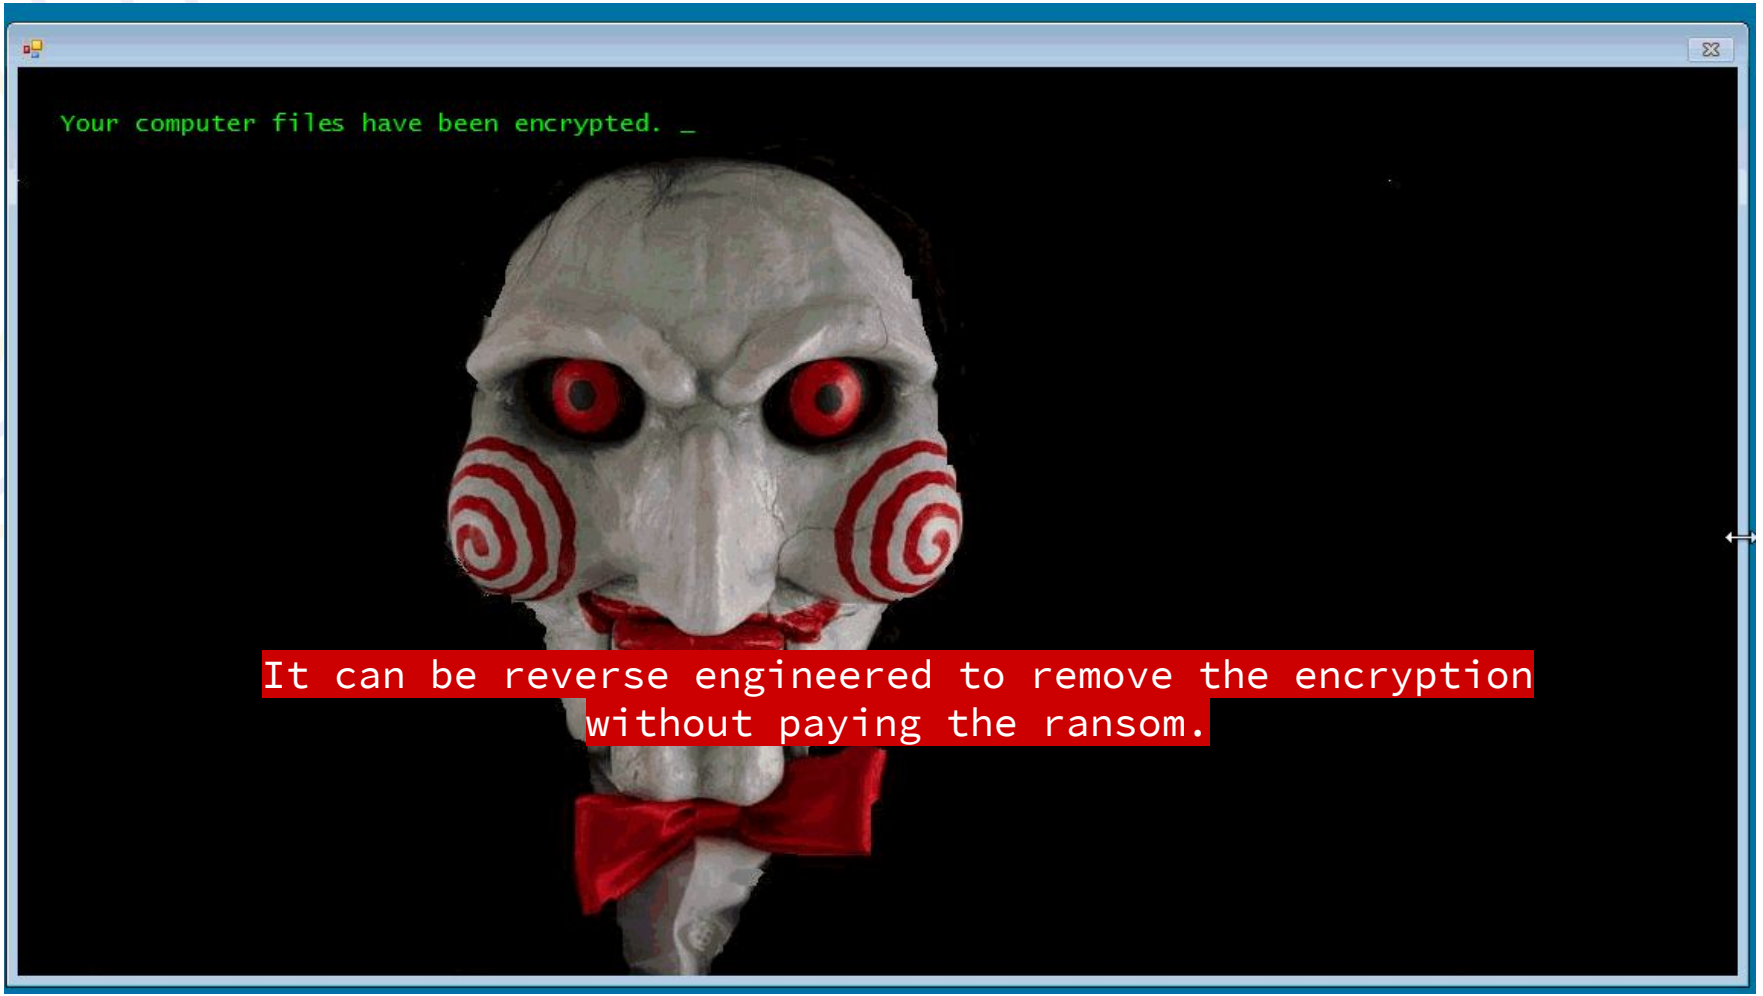
- Backtrack from the current information.
  - Reverse the logic.
  - Backtrack from the current information.
  - Search the sources.

Sample -V

★ Jigsaw

- ❏ Ransomware
- ❏ 2016
- ❏ Written in .NET Framework

https://en.wikipedia.org/wiki/Jigsaw_(ransomware)



Your computer files have been encrypted. _
It can be reverse engineered to remove the encryption without paying the ransom.

Precaution

- Install Anti-Virus/Malware Software.
- Keep Your Anti-Virus Software up to Date.
- Keep your softwares/applications updated.
- Back-up your data.
- Never download attachments from unknown sources.
- Limit personal information you give online.

Precaution:

- ❏ Enable multi-factor authentication
- ❏ Secure ports and services that are exposed on the internet
- ❏ Don’t click on untrusted email attachments or web links
- ❏ Download software and contents from trusted sources only.
- ❏ Clean out outdated and unused accounts.

PE File Structure

DOS headers

- Backward compatibility to MS-DOS, to run and exit without any errors.
- If the program runs under MS-DOS then it will run and print the message "This program cannot be run in DOS mode" and exit without any errors.
- This is the first 64 BYTES of the file.

PE File Structure

Section Table

- The number of the array members is determined by NumberOfSections field in the file header struct or IMAGE_FILE_HEADER
- Each Section header
  - Size is at least 40 bytes.
  - Contains the following informations:
    - Name
    - PhysicalAddress
    - VirtualAddress
    - SizeOfRawData
    - PointerToRawData
    - Characteristics

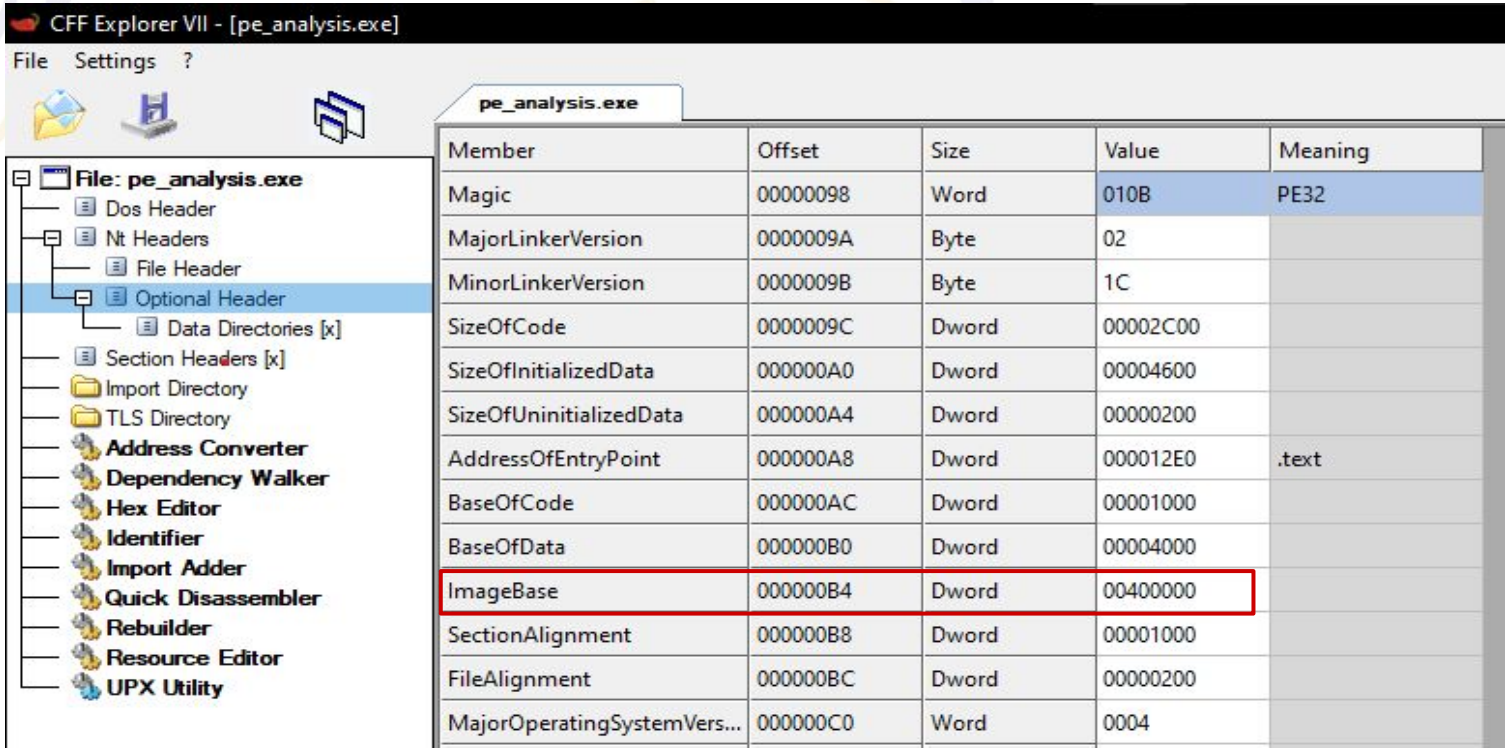
Challenge 1

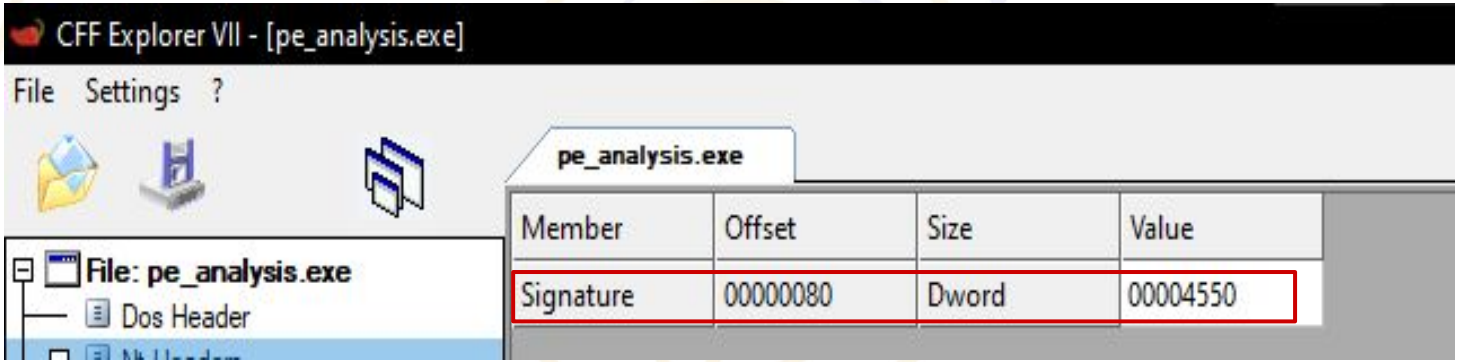
Time for Walkthrough!

What is the value of `ImageBase` of this executable?

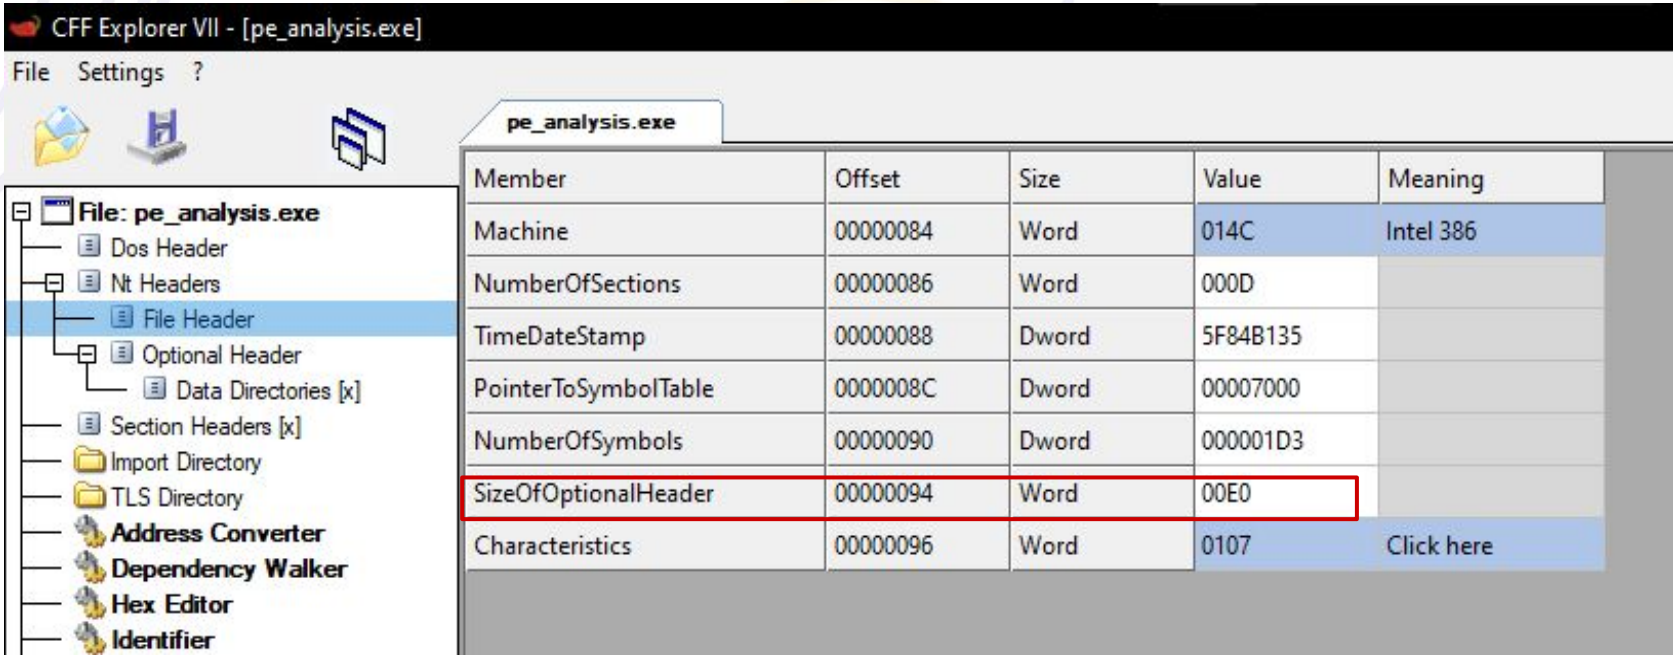


Member	Offset	Size	Value	Meaning
Magic	00000098	Word	010B	PE32
MajorLinkerVersion	0000009A	Byte	02	
MinorLinkerVersion	0000009B	Byte	1C	
SizeOfCode	0000009C	Dword	00002C00	
SizeOfInitializedData	000000A0	Dword	00004600	
SizeOfUninitializedData	000000A4	Dword	00000200	
AddressOfEntryPoint	000000A8	Dword	000012E0	.text
BaseOfCode	000000AC	Dword	00001000	
BaseOfData	000000B0	Dword	00004000	
ImageBase	000000B4	Dword	00400000	
SectionAlignment	000000B8	Dword	00001000	
FileAlignment	000000BC	Dword	00000200	
MajorOperatingSystemVers...	000000C0	Word	0004	

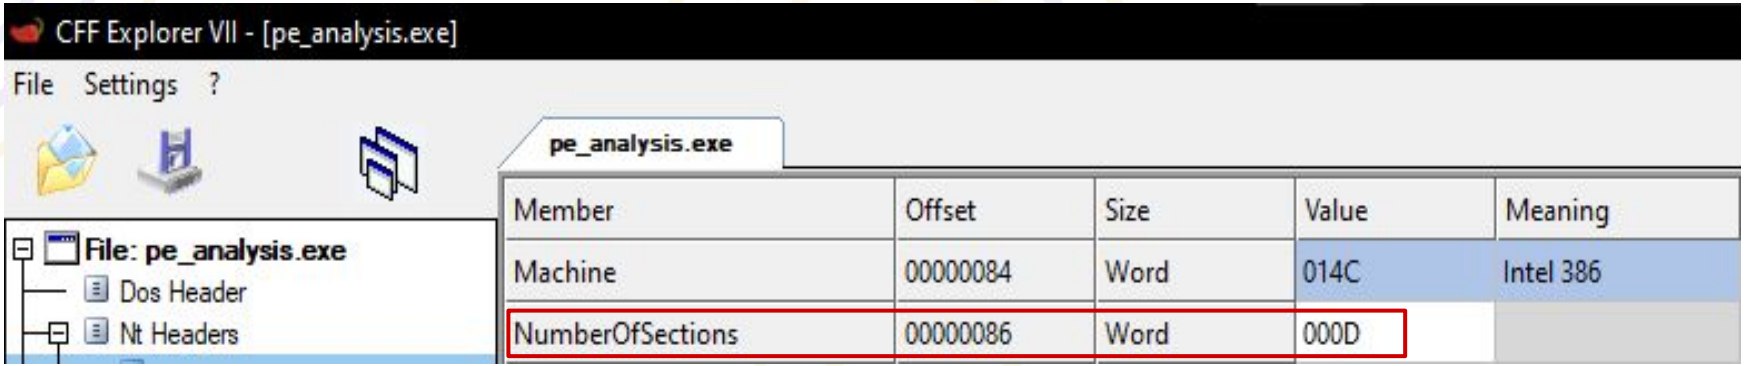
What is value in the `signature` field of PE header?



What is the value of `SizeOfOptionalHeader` field?



Number of sections:



Why is it necessary to know ?

- Fixing distorted headers.
- For unpacking the executable.
- Retrieving other important information related to the executable.
- Research purpose
  - For classifying an application as Malicious or Benign.

Why is it necessary to know ?

Index	Key Features	Malware (5598)	Normal (1237)	Difference
1	Size Of Initialized Data == 0	1626 (29%)	0 (0%)	29%
2	Unknown Section Name	2709 (48.4%)	16 (1.3%)	47.1%
3	DLL Characteristics == 0	5335 (95.3%)	401 (32.4%)	62.9%
4	Major Image Version == 0	5305 (94.8%)	486 (39.3%)	55.5%
5	Checksum == 0	5084 (90.8%)	474 (38.3%)	52.5%

- ★ What is a Malware?
- ★ Why is reverse engineering necessary?
- ★ PE file structure.
- ★ Steps for Malware analysis.
  - Isolation of environment
  - Static & Dynamic Analysis
- ★ Windows Reversing and practise.

Steps for malware analysis

- Environment Isolation: Virtual Machines
- Basic Analysis
  - Fingerprint
  - Virus Scanning
  - Strings
  - Checking for packers and obfuscation
- Static Analysis
  - Analysing the disassembly and use tools for decompilation. Eg Ghidra, IDA pro
- Dynamic Analysis
  - Executing the sample
  - Analysis using debuggers

```

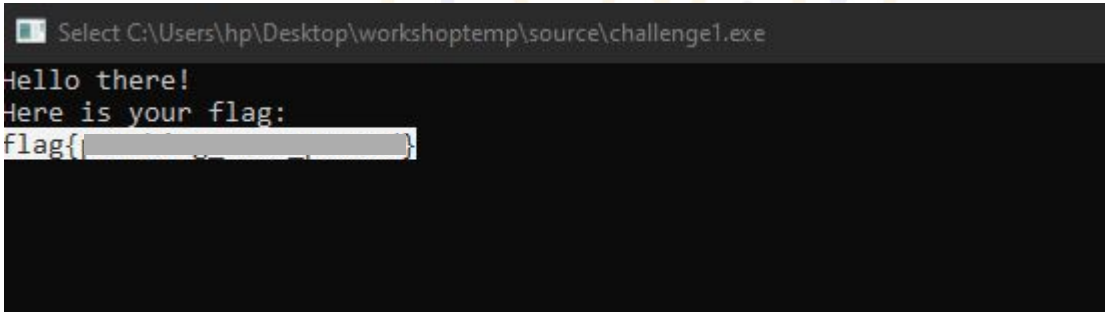
On executing



Packing

- ## What is Packer ?

  A packer is a software that will compress your executable files, similar to the way zip files work.
  When you run the executable it will run the uncompressed code which unpacks the rest of the code and runs it.

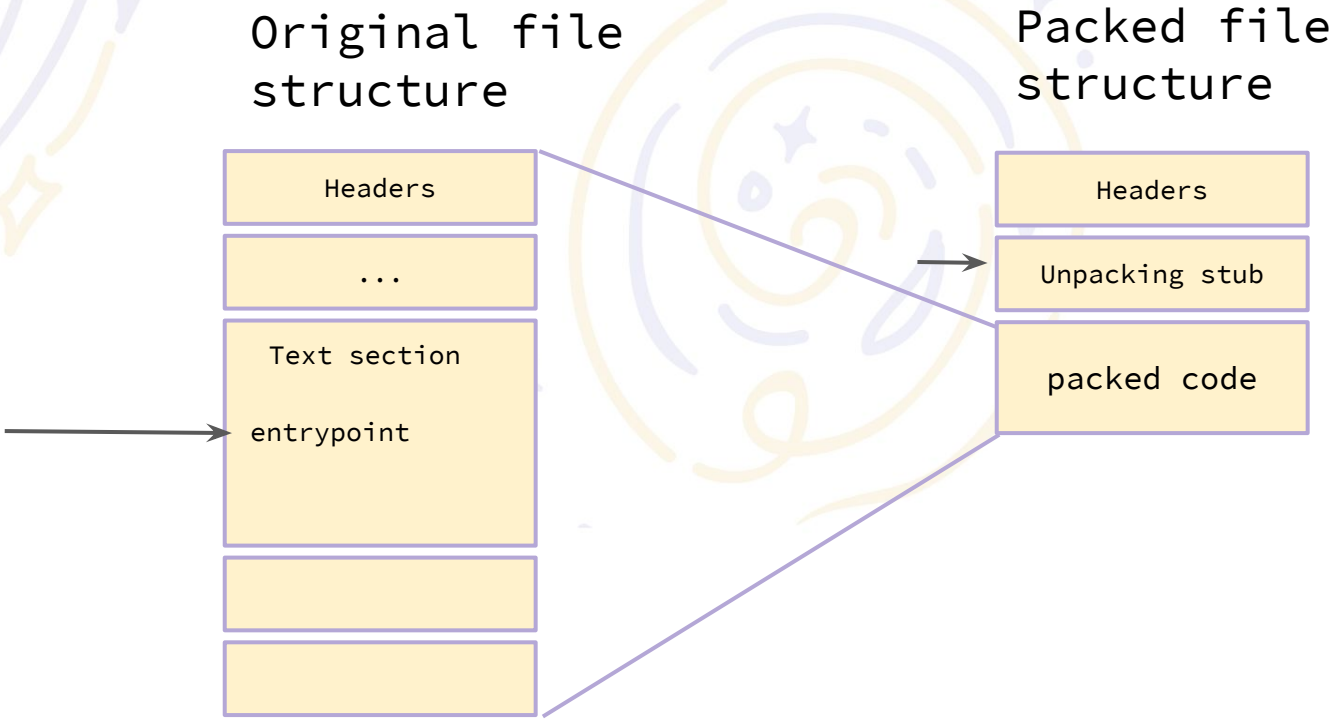
- ## Why to pack any application?
  - To decrease the size of the file.
  - To obfuscate it.
  - Difficult to reverse engineer.

How is Packing done?

The the original code goes through the packing process, where it is compressed or encrypted.

- This new executable contains:
  - New headers
  - Decompression stub
  - Packed data
- The original entry point is changed.

How is Packing done?



How is Unpacking done?

Packed file structure

Some statistics : Packed Malwares

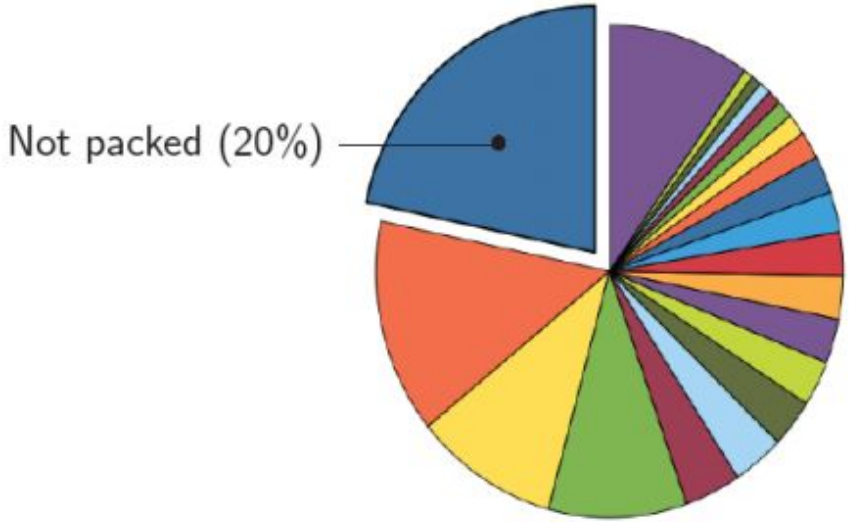

Fig. 1. Malware and packing, 80% of new malware are packed with various packers, 50% of new malware samples are simply repacked versions of existing malware [8].

https://www.researchgate.net/publication/307843262_Generic_Packing_Detection_Using_Several_Complexity_Analysis_for_Accurate_Malware_Detection

Demo

```
C:\Users\hp\Desktop\workshoptemp\challenge_file\Challenge-2>challenge2.exe
Hello there!
Enter the password:

correct!!!
```

Practice Time !!

Time for Walkthrough!

DLL

★ What is a DLL?

- ❏ Dynamic link library
- ❏ It is a library that contains code and data which can be used by more than one program at the same time.
- ❏ Shared library concept.
- ❏ Same file format as PE.
- ❏ Cannot execute on their own.

DLL

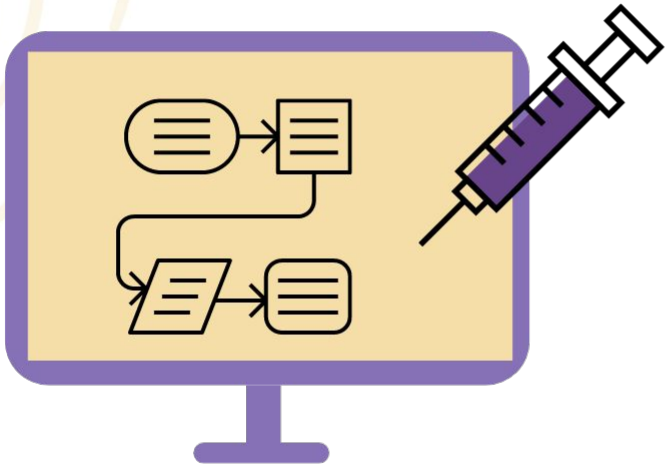
★ Advantages

- ❏ Modularisation of code.
- ❏ Low resource consumption.
- ❏ Eases the process of development/modification

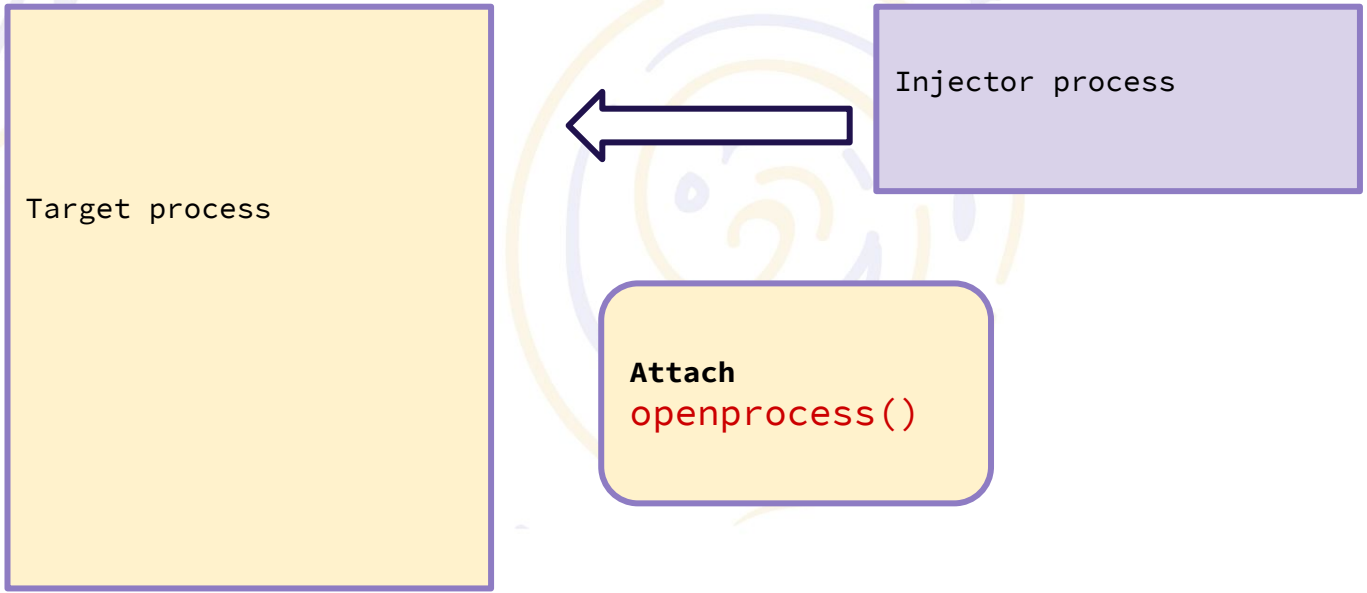
DLL Injection

★ DLL injection is a technique used for executing code within the program, by forcing it to load and run a dynamic library that was not actually meant by its original design.

- ❏ Injector process
- ❏ Target process

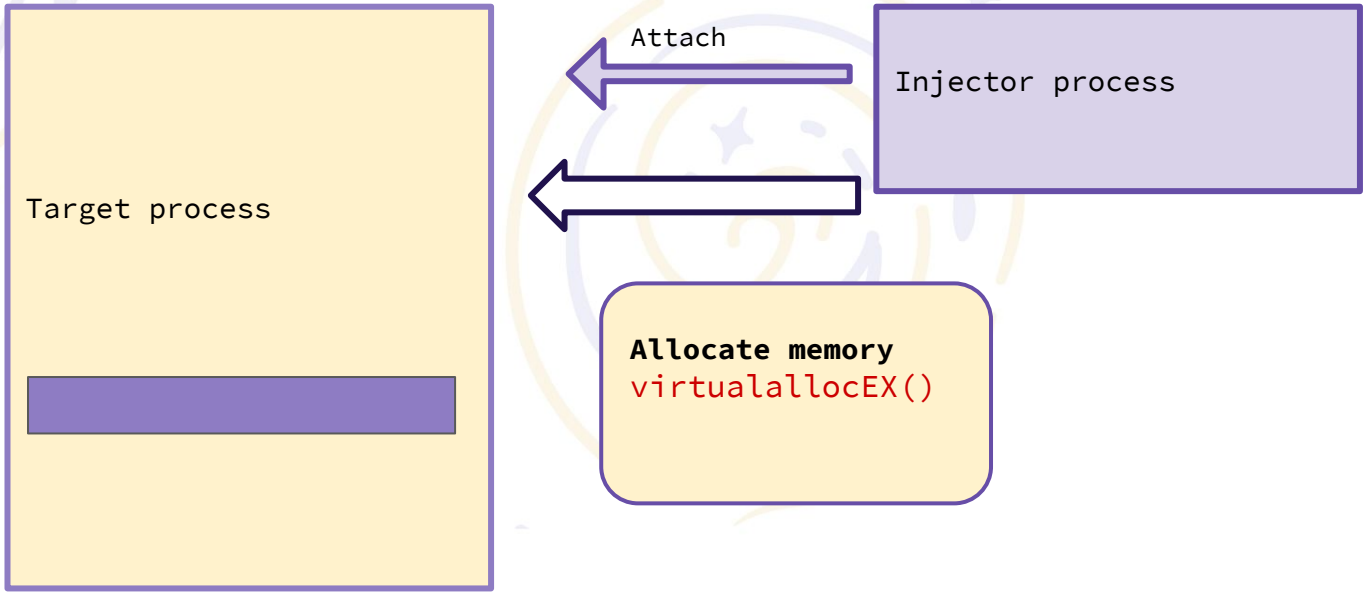


DLL Injection



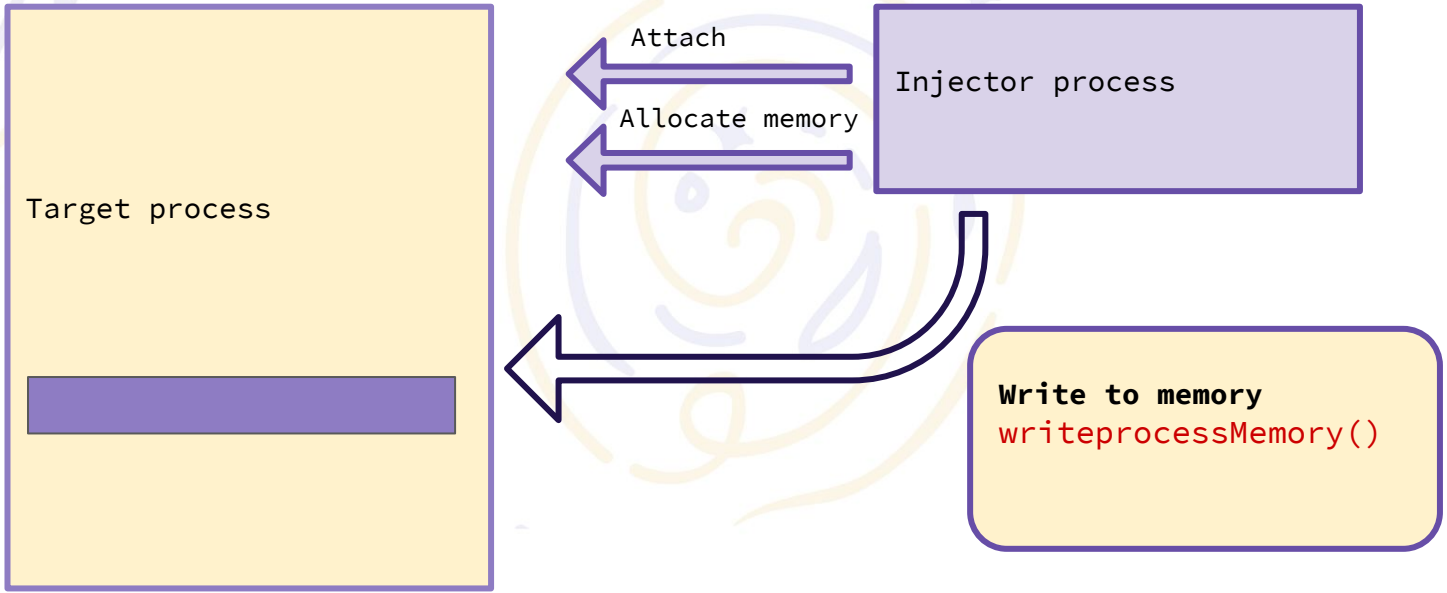
```
HANDLE process = OpenProcess(PROCESS_ALL_ACCESS, 0, process_id);
```

DLL Injection



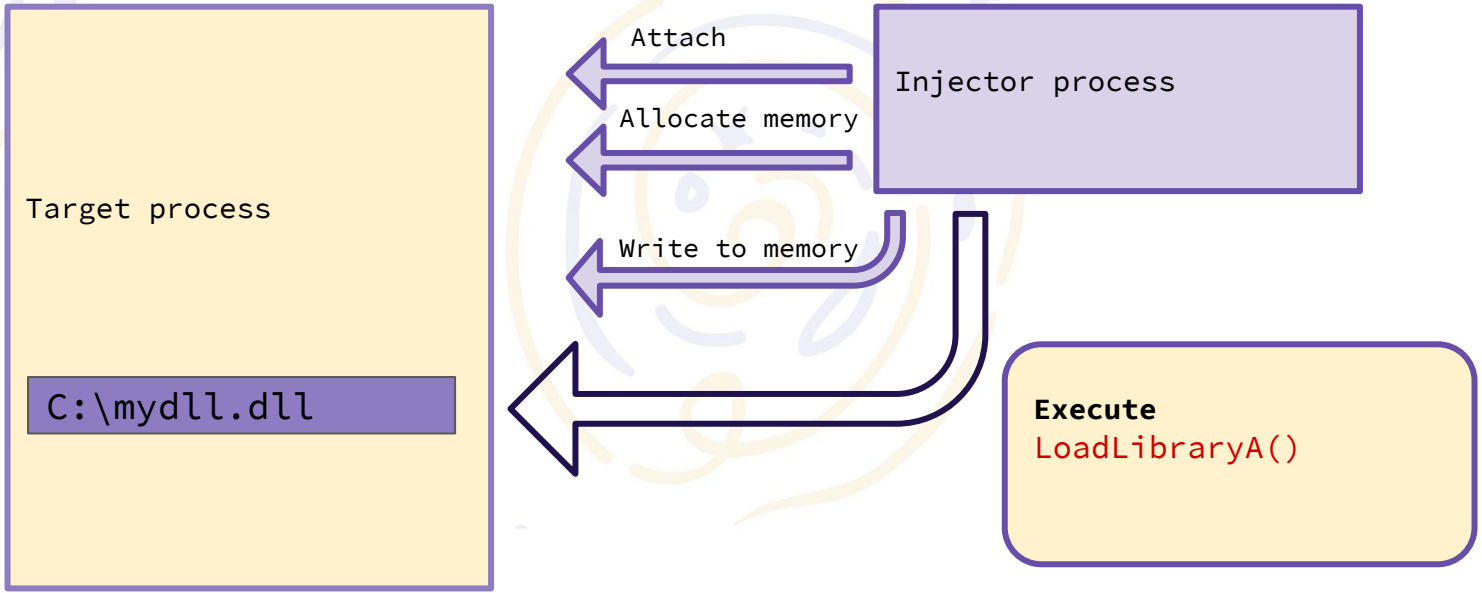
```
base_address = VirtualAllocEx(process, NULL, sizeof(pathDLL), MEM_COMMIT | MEM_RESERVE, PAGE_EXECUTE_READWRITE);
```

DLL Injection



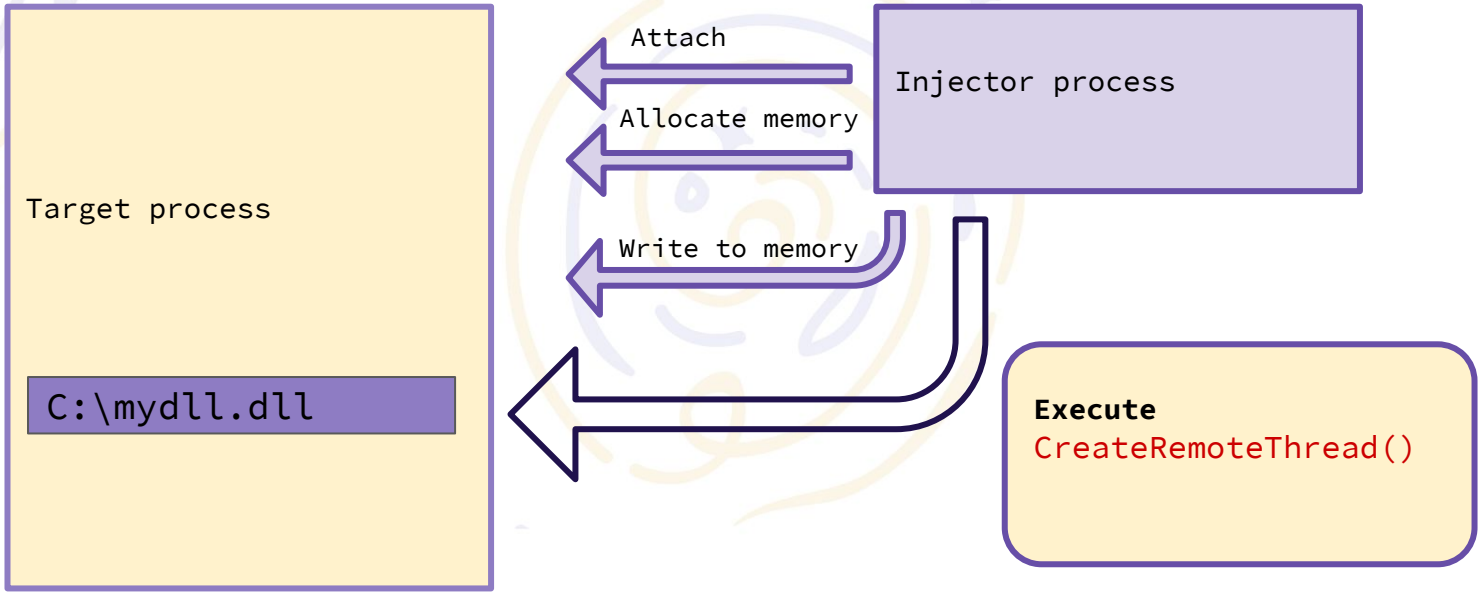
```
WriteProcessMemory(process, base_address, pathDLL, strlen(pathDLL), NULL)
```

DLL Injection



```
LPVOID addr = (LPVOID)GetProcAddress(GetModuleHandle("kernel32.dll"), "LoadLibraryA");
```

DLL Injection



```
HANDLE threadID = CreateRemoteThread(process, NULL,0,(LPTHREAD_START_ROUTINE)addr,base_address, 0, NULL);
```

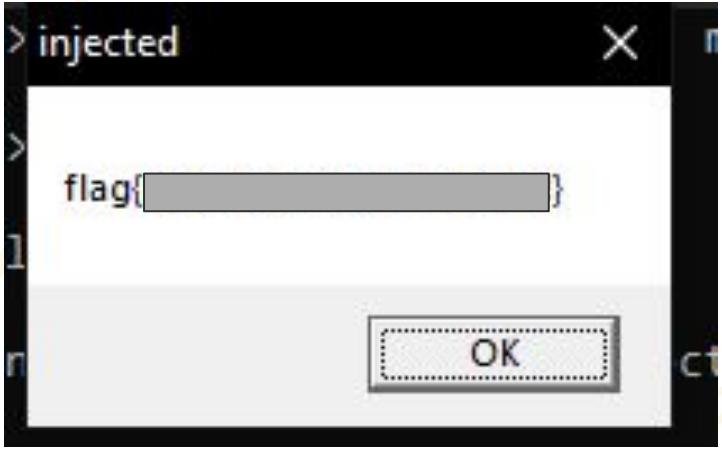
Tada!!

Challenge 4

Steps:

Inject.exe
Victim.exe
Mydll.dll

- ❏ Run Victim.exe
- ❏ Open procexp.exe
- ❏ Take the PID of victim.exe
- ❏ Use inject.exe to inject mydll.dll



Practice Time !!

Walkthrough
Time !!

Different Injection methods:

- DLL Injection
  - Reflective Dll injection
- PE Injection
- Process Hollowing

Points

- Malware use these concepts to attack.
- DLL inject can done on anti-virus softwares.
- Embed it into existing processes so that they can remain undetected and launch and execute additional successful attacks.
- Not all the Malwares are the same so be prepared for a new one.

Anything can happen at any moment

Points

- Danger is not just for a Personal Computer
- Weaponized malwares can affect:
  - Personal systems
  - Public infrastructures
  - Power grids
  - Nuclear plants
  - ...

Challenge 4

Bonus challenge!!

Challenge part 1

Find the 1st function

- TLScalback()
- Windows APIs:
  - Findresource()---> “BIN”
  - Loadresource()
  - SizeofResource()
  - Lockresource()
  - VirtualAlloc()
  - …
- Find the usage of the returned address

Challenge part 2

- Get the dropped DLL.
- Load it in ghidra.
- Get the IMP encryption algorithms

```
CryptAcquireContext dwProvType
CryptCreateHash Algid
CryptDeriveKey Algid
```

Challenge part 2

- Get the dropped DLL.
- Load it in ghidra.
- Get the IMP encryption algorithms

```
CryptAcquireContext dwProvType 0x18 PROV_RSA_AES
CryptCreateHash Algid 0x800C CALG_SHA_256
CryptDeriveKey Algid 0x660E CALG_AES_128
```

Challenge part 3

What to do????

Challenge part 3

Scripting??

Challenge part 3

Easy-peasy

- Swap the address

Challenge part 3

- Get the flag :P

Any
Questions
